Unlimited Possibilities for Limited Budgets

Mobility is more than just a trend. In professional applications it is essential to have all relevant information on time without being bound to a workstation.

In cooperation with cuckoo, ICP Solution distributes an avasis solution, which enables the mobile access to your Agile PLM data.

Cuckoo
Web-based Thin-Client für Agile e6

What to expect from cuckoo:

It is an important task in the product life cycle from development to maintenance to provide significant and relevant information to the right person. This is a basic aim of every PLM implementation and installation.

cuckoo solves this task easy, quick and secure.

The operator is not bound to a permanent workstation and can access to important information anywhere and anytime.

Facts:

cuckoo is a web bases Thin-Client, that

- Enables a easy and quick access to your Agile PLM data through free defined use cases in PLM

- Lightens the initialization of specific information in further departments and therefore supports the PLM-philosophy

- Is based on the available web-service technology since Agile PLM 6.1.2.

- Is only based on Open Source products and technologies

- Usable on any browser capable platform (Windows, Android, Apple iOS, Unix and Linux with the known browsers)

- Works on portable end devices

- Is self-explanatory

Exemplary use case:

Cuckoo is delivered with a standard use case, which you can either extend or adapt to your requirements. It is very easy to create your own use cases with Agile PLM's standard development tools.

Use case: article-document-file
Based on an article the bill of material and the document structure is shown in a combined form including all referenced files as explorer-representation. The files can be displayed directly.

Benefits:

- Quick and easy creation of own use cases

- Definition and maintenance of use cases through customizing possibilities in Agile PLM

- Access authorization to data controlled by Agile PLM mechanisms (e.g. view concept, general access mechanisms, multi-organization or multi-project-access authorization)

- Uses future-proof, free and open Java components which will be further developed

- Easy handling also by occasional users. No additional training needed.

- Cuckoo enables to address any data bank objects in PLM. Also in customer specific extensions in the data module.
